Alice Meylan, Juliana Capitanachi Gauthy

Does mass mobilization lead to political regime changes, and to what extent are these results impacted by the nature of the mobilization (violent or non-violent)?

We would like to use the datasets below to gather data about past mobilization, their nature, intensity, duration… and finally their outcome. The current situation in France pushes questions on what makes or breaks a mobilization, whether pacifism or violence usually gets the change.

Seeing as we have datasets from different time ranges we could also expect the answer to these questions to differ in time, which would also be quite interesting. Some datasets also account for violence used against civilians, if it connects we might want to use this as a variable to study whether the movement was successful as well.

Conflict and Protest

Harvard datasets :
Non Violent and violent campaigns and outcomes :
Taking only into account “maximalist” protests, people mobilized in order to overthrow a government, secede or get a foreign army out. Around 600 observations between 1945 and 2019.
https://dataverse.harvard.edu/dataverse/navco

Mass mobilization datasets :
Containing over 17 000 observations between 1990 and 2020.
https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10.7910/DVN/HTTWYL

Conflict and Protest Events ACLED :
Needed free registration to access
Many datasets available such as Number of demonstration by country-year accounting all protests and demonstration (https://acleddata.com/aggregated/number-demonstration-events-country-year)
Number of political violence events by country-month-year (https://acleddata.com/aggregated/number-political-violence-events-country-year)

Regime changes (proxied by fluctuations in the democracy index):

Our world in data democracy index: An aggregation of data from V-dem where we can observe the democracy index per country and year from 2006 to 2024. This index measures the extent to which citizens can choose their political leaders in free and fair elections, enjoy civil liberties, prefer democracy over other political systems, can and do participate in politics, and have a functioning government that acts on their behalf. It ranges from 0 to 10 (most democratic).
https://ourworldindata.org/grapher/democracy-index-eiu

The Episodes of Regime Transformation (ERT) dataset:

Identifies episodes of democratization (liberalizing autocracy, democratic deepening) and autocratization (democratic regression, autocratic regression) in V-Dem datasets. Data ranges from 1990 to 2025, including more than 680 episodes of regime transformations.
https://www.v-dem.net/data/ert-dataset/

If needed, the data from **Our World in Data** is extracted from **V-dem datasets** which are accessible here: https://www.v-dem.net/data/the-v-dem-dataset/
